

User types in NAV13 subscription licensing

With Subscription Licensing, customers subscribe to the rights to use Microsoft software and services instead of owning them. Solution Functionality and User Access are licensed through three Subscriber Access Licenses (SALs):

Full Users SALs

A Full User is licensed for access across the ERP Solution to all of the functionality contained in the SAL. There are two types of SALs for Full Users: Standard User SALs and Extended User SALs.

1. Standard User SAL: Entitles the licensed user to perform Full User tasks across the ERP Solution using all of the functionality included in the Starter Pack.
2. Extended User SAL: Entitles the licensed user to perform Full User tasks using all of the functionality contained in the Starter Pack and the Extended Pack. Refer to Appendix B: Microsoft Dynamics NAV 2013 R2 for Subscription Functionality and for a list of the included functionality in the Starter Pack and Extended Pack.

Limited User SALs

A "Limited User" means a user who accesses the ERP solution directly or indirectly for purposes of completing only the tasks described below. Any access beyond these limitations requires a Full User SAL.

- "Read" access to data contained in the ERP solution through any client; or
- "Write" access via the time and expense functionality (Microsoft Dynamics GP only) or timesheet functionality (Microsoft Dynamics NAV only); or
- "Write" access (Microsoft Dynamics NAV only) through any client accessing the ERP solution via the Microsoft Dynamics NAV API to a maximum of 3 table objects with the following exceptions:
 - Limited users are not authorized to write to any of the following tables: General Ledger Entry (table number 17), Permission Set (table number 2000000004), Permission (table number 2000000005) or Access Control (table number 2000000053); and
 - Any table described in Appendix A does not count towards the 3 table objects. Microsoft may update such Appendix A of the Licensing Guide from time to time, at its discretion, to include additional Tables.

Choosing the Appropriate SAL Type

To choose the appropriate SAL type, determine the functionality the customer requires for their ERP solution. If the customer requires only the functionality included in the Starter Pack, then license Standard SALs (or a combination of Standard SALs and Limited SALs). If the customer requires the functionality of the Extended Pack in addition to the Starter Pack, then license Extended SALs (or a combination of Extended SALs and Limited User SALs).
